SKILLS

Java, C++ & Python Programming

Database Management (MySQL, MongoDB)

Web Development Fundamentals

Research & Independent Learning

Teamwork & Collaboration

Critical Thinking and Problem-Solving

CERTIFICATIONS

Data Structures and Algorithms (DSA) Course - Google Developer Groups (GDG)

EDUCATION

BACHLOR OF SOFTWARE ENGINNEERING
AASTU | Addis Ababa
Expected Graduation: June 2029
CGPA: 3.8/4.0

PROFILE

Software engineering student with a 3.8/4.0 CGPA and a keen interest in technology, focused on finding simple, practical solutions to problems. Through my studies and personal projects, I have gained hands-on experience with Java, C++, Python, MySQL and MongoDB, while developing my problem-solving and teamwork skills. These experiences have taught me to learn independently and adapt quickly when working with new technologies. I am interested in how software is designed, built and maintained in real-world environments, and I am looking to keep growing as an engineer.

PROJECTS & EXPERIANCE

Through my university studies and personal projects, I have had the chance to work with Java, C++, Python, MySQL, MongoDB, and SQLite while building projects that helped me put what I learned into practice. I have worked on projects such as an Adaptive Traffic Management System, a Food Delivery Database, a Library Management System, a Personal Expense Tracker, and an Inventory Management System. Working on these projects has given me experience in programming, database design, file handling, and problem-solving, while also teaching me how to organize my work and deal with challenges when things do not work as expected. I enjoy learning by building and experimenting, and each project has helped me become more confident with technology and more willing to take on something new.
